

PRODIM

PROLINER CT SOFTWARE

The Proliner worktop software creates more than just a digital template!
It connects field measurements seamless to the factory.

Professional Dimensioning
for Production Improvement

PROLINER CT SOFTWARE

the perfect solution for measuring, editing and finishing

Edit measurement

Edit your measurement on the proliner with the onboard CAD software.

Create offsets

Automatically offset lines with custom offset.

Dimensions

Insert dimensions, linear, horizontal, vertical, radial and angle.

Make it CNC ready - Instant tangentials

Automatically creates a fluent line between the measured points; various "radii" are made between the measured points to make the measurement CNC ready.

Import sinks and cut-outs

Place digitized sinks and cut-outs directly into your measurement or use the libraries to insert symbols for production. Import .DXF files or Proliner measurements.

Create elements

Create elements, make selections within a measurement and save the element.

Slabs

Measure your slabs and position your complete measurement or elements in the slab.

Snapshots

Make multiple snapshots from your measurement and visualize these in the worksheets.

Project data

Create projects and add complete project data.

Measurement data

Add specific single measurement data.

Signature

Let the client check the measurement and information and sign off a project immediately on the Proliner.

Preview function

Preview function to see your measurement before opening or check your PDF report before exporting and printing.

Save as / Save selection

Edit a measurement and save it with a new name or select parts within a measurement and save only the selected parts as a different file. Newly saved files will be available to be edited on the Proliner, as a .DXF and to be imported in another measurement.

Multiple export

Export multiple files at once, export all your snapshots as .DXF or as separate PDF pages.

Edit DXF

Open and edit .DXF files on the Proliner.

Free-handsketch

Use the free-handsketch to draw and write on your measurement and export it to your pdf.

Create complete reports, customize the look and feel of them and add your company logo. The reports can exist out of a page with the project data, complete overview off the total project measurement and the single split production pieces with dimensions. But also it can contain extra pages, one for each production piece.
