

PRODIM

Procutter®

The Procutter® is specially designed for creating templates in combination with the Proliner®. With this combination, creating templates of stairs, countertops, backsplashes, swimming pool edges, formed profiles and bathrooms has never been easier!

Procutter®

The use of the Proliner® and the Procutter® ensures simplification of your production process. All measured files are processed one by one with the Procutter. Within minutes a template can be cut from the foil. The result is a perfect model of the measured object.

PROLINER®

Professional Dimensioning
for Production Improvement

Simplify your production process!

- Measure your project with the Proliner® to the exact mm.
- The Proliner® creates a dxf file, which can be read directly in your CAD program or Procutter.
- Enter the foil in the Procutter®.
- With the Procutter® you can make a 1 on 1 template within minutes.
- Next, place the template on the material to be processed.
- Now you can edit, cut to size or duplicate your project quickly and easily.
